ENTANGLED DEPENDENCIES

Michelle Nuccio

PRELIMINARY CONSIDERATION FOR THE INVESTIGATION

GEOPOLITICS OF THE DATASCAPES

Who posses data, platform and infrastructure are responsible for dictating economic and political dependancies

\+ I° Capstone PHYSICAL LAYER

\+ II° Capstone INVISIBLE LAYER

\+ III° Capstone DEPENDENCE LAYER

+ I° Capstone

PHYSICAL LAYER

Places
Manifestation of the power through the infrastructure

INVISIBLE GEOGRAPHY

HOW TO VISUALIZE ALL THE INFRASTRUCTURE AND WHO POSSESS IT?

where?

No Borders

- OCEAN
- EARTH
- SPACE

HOW THIS PLACES ARE LEGISLATED?

Tangible infrastructure

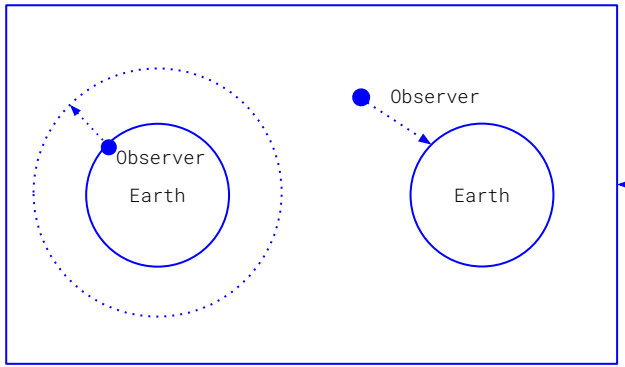

- Marine Cables
- Data Centers
- Satellites

WHO HAS THE POWER?
WHO OWNS THIS INFRASTRUCTURE?

Maps and Matrix here are used as a critical tool to reveal interconnected pattern and relations

James Corner
Ian McHaarg

HOW I WANT TO OBSERVE THE SYSTEM?

+ II° Capstone

INVISIBLE LAYER

Interconnected global ecosystem of informations, human exchange and digital interaction

how?

GEOGRAPHY OF ASYMMETRY
From ARPANET to INTERNET

IANA

- RIPE NCC
- ARIN
- APNIC
- LACNIC
- AFRINIC

WHO OWNS THIS PROTOCOLS TODAY?

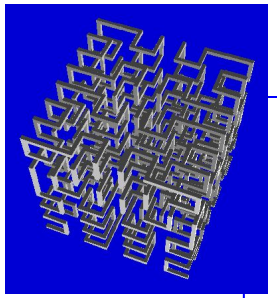

WHO CAN AFFORD THIS?

Infinite IPv6

limitate IPv4

FROM SCARCITY TO RECURRING INCOME

Economic Value

Epigenetic Landscape theory and Matrix here are used as a critical tool to reveal invisible layer of relations

HOW TO VISUALIZE ALL THIS INVISIBLE PROTOCOLS IN A MORPHOLOGY?

Hilbert Diagram

+ III° Capstone **DEPENDENCE LAYER**

WHO DOES A PLACE DEPEND ON TO BE CONNECTED?

The dependence can depend by the physical infrastructure or the internet protocol

how?

- PHYSICAL LAYER
- ACCESS TO THE INTERNET

WHO OCCUPIES THE WEB?

PLATFORMS

COLLECTION OF DATA

WHAT IS COLLECTED AND FROM WHOM?

AI SYSTEM

HOW CAN WE LEARN TO USE AI AS NEW TOOL Not something that we depend on

DEPENDENCE HERE IS RELATED TO WHO OWNS THE INFRASTRUCTURE AND THE PROTOCOL BUT ALSO THE INFORMATIONS SHOWED ON THE WEB

Some examples: Egypt, Ucraina, Russia, China…

LONG TAIL OF THE INTERNET AS A NEW PLACE OF RESISTANCE FROM “DIGITAL COLONIALISM

This Point is still in process.

AI connects dependence on data with dependence on computing infrastructure.

Who controls the resources, whose knowledge is represented, and who can challenge the outputs?

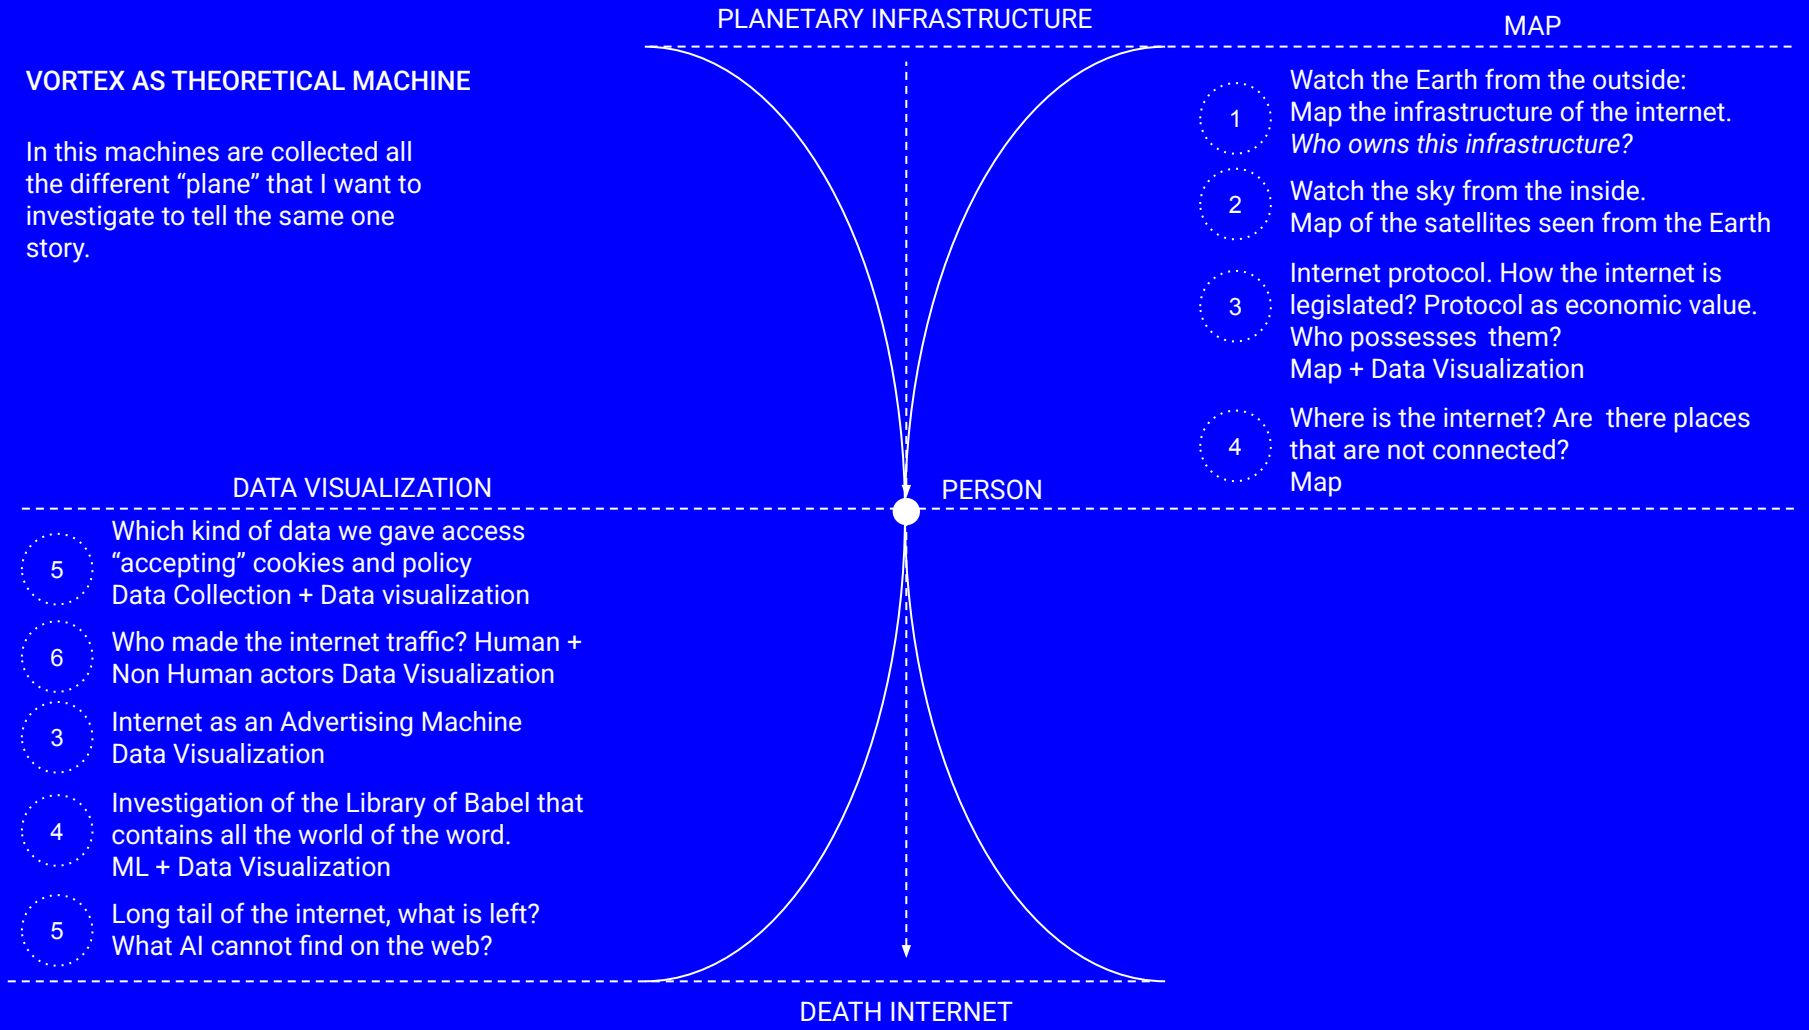

BRIEF

Internet is a planetary phenomena, something so big and complex that can't be understood in its totality.

There are infinite ways to talk about it but, here, Control is used as a critical lens of investigation for this entangled ecosystem and Scale as a narrative line - from its conception as a global place dominated by agency and protocols where inequalities manifest, to a space inhabited by humans and not-humans actors.

Who owns the power and the informations? And how do we feed everyday the system that controls us?

To investigate this topic, I will allow myself to be lost in this infinite collection of data, remembering that data never represents the objective truth, but that the way in which they are represented build only one subjective narrative among many. In this sense, the final output wouldn't give a different a total understanding of the internet itself but, will propose [number] different ways to observe the same plot: The internet as battle ground in which dependences between countries, companies and individuals take shape.

PLANETARY INFRASTRUCTURE
MAP
VORTEX AS THEORETICAL MACHINE
In this machines are collected all the different “plane” that I want to investigate to tell the same one story.
1
Watch the Earth from the outside:
Map the infrastructure of the internet.
Who owns this infrastructure?
2
Watch the sky from the inside.
Map of the satellites seen from the Earth
3
Internet protocol. How the internet is legislated? Protocol as economic value.
Who possesses them?
Map + Data Visualization
4
Where is the internet? Are there places that are not connected?
Map
DATA VISUALIZATION
PERSON
5
Which kind of data we gave access “accepting” cookies and policy
Data Collection + Data visualization
6
Who made the internet traffic? Human + Non Human actors Data Visualization
3
Internet as an Advertising Machine
Data Visualization
4
Investigation of the Library of Babel that contains all the world of the word.
ML + Data Visualization
5
Long tail of the internet, what is left?
What AI cannot find on the web?
DEATH INTERNET

ENTANGLED DEPENDANCIES

Internet is a planetary phenomena, something so big and complex that can't be understood in its totality.

There are infinite ways to talk about it but, here, **Control** is used as a critical lens of investigation for this *entangled* ecosystem and **Scale** as a narrative line - from its conception as a global place dominated by agency and protocols where inequalities manifest, to a space inhabited by humans and not-humans actors.

Who owns the power and the informations? And how do we feed everyday the system that controls us?

To investigate this topic, I will allow myself to be lost in this infinite collection of data, remembering that data never represents the objective truth, but that the way in which they are represented build only one subjective narrative among many. In this sense, the final output wouldn't give a different a total understanding of the internet itself but, will propose [number] different ways to observe the same plot: **The internet as battle ground** in which dependences between countries, companies and individuals take shape.

THE AGENCY OF MAPPING:
SPECULATION, CRITIQUE, AND INVENTION

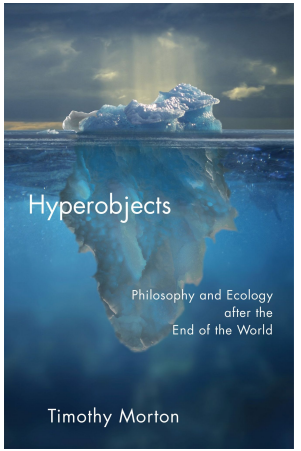

Mapping is a fantastic cultural project, creating and building the world as much as measuring and describing it. Long affiliated with the planning and design of cities, landscapes and buildings, mapping is particularly instrumental in the construing and constructing of lived space. In this active sense the function of mapping is less to mirror reality than to engender the reshaping of the worlds in which people live. While there are countless examples of authoritarian, simplistic, erroneous, and coercive acts of mapping, with reductive effects upon both individuals and environments, focus in this essay is upon more optimistic revisions of mapping practices.[1] These revisions situate mapping as a collective enabling enterprise, a project that both reveals and realizes hidden potential. Hence, in describing the "agency" of mapping, I do not mean to invoke agendas of imperialist technocracy and control but rather to suggest ways in which mapping acts may emancipate potentials, enrich experiences, and diversify worlds. We have been adequately cautioned about mapping as a means of projecting power-knowledge, but what about mapping as a productive and liberating instrument, a world-enriching agent, especially in the design and planning arts?

As a creative practice, mapping precipitates its most productive effects through a finding that is also a founding; its agency lies in neither reproduction nor imposition but rather in uncovering realities previously unseen or unimagined, even across seemingly exhausted grounds. Thus, mapping unfolds potential; it re-makes territory over and over again, each time with new and diverse consequences. Not all maps accomplish this, however; some simply reproduce what is already known. These are more "tracings" than maps, delineating
